## EDUCATION

---

### VIT-AP University

*Bachelor of Technology in Computer Science and Engineering*

Vijayawada, AP

Sep. 2023 – Sep 2027

### Narayana Junior College

*Intermediate (MPC - Mathematics, Physics, Chemistry)*

Nellore, AP

Aug. 2021 – May 2023

## TECHNICAL SKILLS

---

**Languages:** JavaScript, Python, Java, Go, HTML, CSS

**Frameworks & Libraries:** React, Node.js, Express.js, EJS, TailwindCSS

**Databases:** PostgreSQL, MongoDB, Redis

**Tools & Platforms:** Git, Docker, Linux, VS Codium, IntelliJ

## PROJECTS

---

### depGraph | *Node.js, Express, MongoDB, React, XYFlow*

- Built an npm dependency graph visualizer that lets users search any package or upload a `package-lock.json` to explore the exact dependency tree of a project.
- Implemented interactive graph rendering with XYFlow and automatic layout via ELK.js, supporting zoom, pan, and per-node inspection.
- Integrated OSV.dev for vulnerability detection and npms.io for package quality scoring, with severity classification and fixed-version info.
- Added JWT-based auth with Google OAuth (Passport.js) and MongoDB persistence, allowing users to save and revisit graphs.

### waveRoute | *Node.js, Express, React, MapLibre*

- Developed an interactive 2D world map plotting 5,000+ live radio stations as clickable points using MapLibre.
- Enabled instant in-browser streaming of any station on click, with genre-based filtering across the full station set.
- Built a lightweight Express backend to serve and filter station data efficiently to the map frontend.
- Designed a minimal player UI (play/pause, volume, genre navigation) integrated directly into the map view.

## PROFESSIONAL SUMMARY

---

3rd year B.Tech CSE student with full-stack development experience across the JavaScript/Node ecosystem, Python, Java, Go, SQL, and MongoDB.

Built and shipped full-stack projects covering dependency graph visualization, geospatial data rendering, and REST API integration, using React, Express, MongoDB, and PostgreSQL.

Comfortable across the stack: from lockfile/dependency parsing and vulnerability aggregation on the backend to interactive graph and map visualizations on the frontend.

Looking to grow into backend-heavy and systems-level roles, with a growing interest in low-level programming and inference engineering.
