PROFESSIONAL SUMMARY

4th-year B.Tech CSE student focused on backend and full-stack development using JavaScript/Node.js, Go, Java, Python, SQL, and MongoDB.

Built backend projects involving file parsing, JWT authentication with Google OAuth, LRU and stale-while-revalidate caching, and batched external API integrations.

Developed REST APIs, database-backed applications, and full-stack systems, with a focus on backend architecture, performance, and reliable integration with external services.

EDUCATION

VIT-AP University, Vijayawada, AP

Bachelor of Technology in Computer Science and Engineering — Sep. 2023 – Expected May 2027

CGPA: 8.95/10

Narayana Junior College, Nellore, AP

Intermediate (MPC – Mathematics, Physics, Chemistry) — Aug. 2021 – May 2023

TECHNICAL SKILLS

Languages: Java, Go, JavaScript, Python, HTML, CSS

Frameworks & Libraries: React, Node.js, Express.js, EJS, TailwindCSS

Databases: PostgreSQL, MongoDB, Redis

Cloud: AWS (EC2, ALB, ASG, S3), Heroku, Cloudflare, Vercel

Tools & Platforms: Git, Docker, Nginx, Linux, VS Code, IntelliJ

PROJECTS

depGraph | *Node.js, Express, MongoDB, React, XYFlow* Live | Github

- Built an npm dependency-graph visualizer: resolves a package's full tree via breadth-first search (custom O(1) queue, 8-way batched requests, three dedup sets to avoid re-expanding shared packages) or parses an uploaded package-lock.json directly.
- Wrote a lockfile parser handling nested node_modules resolution, monorepo/workspace packages, and unmet peer dependencies, normalized alongside BFS-built graphs into one consistent schema.
- Batched vulnerability and quality lookups (OSV.dev, npms.io) across hundreds of nodes per request, with an LRU cache and npm's lightweight metadata format to keep memory and request volume manageable at scale.
- Added JWT auth with Google OAuth (Passport.js) and MongoDB persistence so users can save and revisit graphs.

waveRoute | *Node.js, Express, React, MapLibre* Live | Github

- Built an interactive world map rendering 5,500+ live radio stations as clickable markers using MapLibre.
- Implemented genre-based filtering to help users quickly discover stations across the global dataset.
- Developed an Express backend using stale-while-revalidate caching to keep responses fast while refreshing station data in the background.
- Prevented cache stampedes by implementing request deduplication, ensuring only one refresh occurs when cached data expires under concurrent requests.

CERTIFICATIONS

Oracle Certified Foundations Associate, Java — Oracle

Object Oriented System Development Using UML, Java and Patterns — NPTEL
